Enfis Expands in North America Through Link with ACS

Bedminster, New Jersey, USA - (3rd August) - Enfis Group Plc. (LSE:ENF), an innovator of intelligent LED lighting systems and technologies, today announced that it has retained Associated Component Sales (ACS) of Atlanta, Georgia to represent its line of LED products throughout the United States and Canada.

'Due to increased demand for our products, the Enfis sales team required additional, external resources that could support and enhance its efforts,' said Shaun Oxenham, Chairman of Enfis Group, 'ACS was at the top of our list to fulfill that need. The company's longstanding relationships with the leaders of the lighting industry throughout the United States and Canada will enable Enfis to reach more decision-makers and significantly expand our total share of the lighting market.'

As a part of the agreement, Associated Component Sales will sell the complete Enfis line of high-power LED arrays, electronic drivers, optics, and accessories, to luminaire and lighting fixtures manufacturers, Enfis' primary market.

Associated Component Sales proven track record and technical expertise were key factors in Enfis' selection of the manufacturer's representative. Associated Component Sales professionals have specialized training and knowledge in the latest LED technologies, products and markets, allowing them to effectively represent Enfis' products.

'ACS is working to address today's high-power lumen output LED designs and tomorrow's next-generation requirements with scalable solutions,' said Jim Brotherton, president, Associated Component Sales. 'ACS has a sales force that knows LED technology and understands the value that it has for customers. We look forward to a very productive relationship with Enfis.'

Enfis continues to introduce new, high-power intelligent, 'tunable' LED lighting for a wide variety of general illumination applications including, stage and studio, archtainment, low-voltage landscape, track heads, street and perimeter lighting, commercial and residential recess down lighting, and portable and solar lighting systems. The company presently offers system configurations delivering over 2500 lumens and a rated lifetime of more than 50,000 hours. All configurations are fully dimmable and available in Warm White (2800K), Cool White (6500K), Hi-CRI White (>92), RGB and Monochromes. A variety of premium optics also provides a choice of beam patterns ranging from 14 to >120 degrees.

About Associated Component Sales

Associated Component Sales (ACS) is a full-service manufacturer's representative selling component parts to Original Equipment Manufacturers of lighting systems throughout North America. With locations in the Southeast, the Midwest, the Northeast and Canada, ACS provides high-value, sole-source solutions in the latest technologies, markets and products. The ACS team believes that without quality products and excellent service to back it up, customers will eventually take their business elsewhere, regardless of price. With this in mind, ACS is devoted to proven, established, component manufacturers, with a track record of exceptional quality products and customer service. More information about the Associated Component Sales can be found at www.ascatlanta.net.

About Enfis

The Enfis Group Plc designs, manufactures and markets intelligent, high-power, 'tunable' LED lighting with a focus on providing cutting-edge solutions that can be easily integrated into luminaires, fixtures and custom projects. The company's expertise covers semiconductor technology, packaging, thermal management, optics, electronic design, software and volume manufacturing.

Enfis 'smart' LED array technology offers luminaire and fixture manufacturers unsurpassed optical white light output. Their ultra-bright, multi-watt, multi-wavelength 'smart' LEDs are designed so that each wavelength can be individually controlled and monitored. Each Enfis 'smart' LED array has active color temperature and heat-sensing components that control, calibrate and regulate the light output of each wavelength on the array for the lifetime of the component.

More information about the company's LED products and solid-state lighting technologies can be found at www.enfis.com.
