

## **Environmental Procedure No 16**

### **Environmental statement**

Enfis have been monitoring their environmental performance over the period December 2005 to April 2006. We achieved the results as follows:

Specified target	Achievement
100% recycling of waste paper To reach our target, we will create more recycled paper storage locations	98%
100% recycling of waste water We currently reuse all our waste water from the air-conditioning units, but more containers will be provided to improve the efficiency of the collection process.	100%
100% recycling of batteries All our used batteries are collected for disposal to recycling. One more collection point will be installed shortly to improve the efficiency of the collection process.	100%
Eliminate waste disposed down sink Waste products are prohibited from being disposed down the sink, and the situation is being closely monitored.	Nil products

These targets will be reviewed in October, and our current performance will be reported in this procedure.
