Enfis Group plc
("Enfis" or the "Company")
New Contract Win

Enfis, a leader in the design, development and manufacture of intelligent high power light emitting diode (LED) arrays and smart light engines, is pleased to announce that it has signed an exclusive agreement with Gekko Technology Ltd ("Gekko"), the LED lighting providers to the film, television, photographic and entertainment industries.

Under the terms of the deal Enfis will provide a high-spec light engine, developed with Gekko to address Gekko's specific requirements for high quality television and film lighting.

The initial order will be worth a minimum of £850,000 and the systems will be provided over the course of a three year period.

David Amphlett, M.D. of Gekko, stated: "We have been extremely impressed with Enfis' ability to provide high power, multi-wavelength LED spot sources, together with smart array and controls, as well as their ability to tailor products to individual needs. Television and film lighting integrators require the highest colour quality and we look forward to continuing the relationship with Enfis."

Shaun Oxenham, Chief Executive of Enfis, commented: "Gekko has gained a strong reputation in a short space of time for providing fixtures of choice in its class. I am, therefore, delighted that they have chosen Enfis to partner them in providing a truly innovative, ground-breaking solution for smart, efficient TV and film lighting."
